

## One Application Across All Devices

### Intuitive, powerful and secure mobile expense and invoice management

Chrome River's deep understanding of expense and invoice management combined with a mobile-first design approach is at the core of the Chrome River Suite. Designed to be exceptionally intuitive yet powerful and flexible enough to manage expenses and invoices even while traveling, your organization can leverage an intuitive, powerful and secure experience on any device, regardless of screen size or resolution. Built as an HTML5-based Web Application, expenses and

invoices can easily be created, submitted, and approved while on the go. End users can manage expense and invoice related tasks on any device, from smartphones and tablets to laptop or desktop computers. No downloads are necessary, providing a high level of security. And CFOs, controllers and finance managers can enforce compliance with company policies anywhere employees work with Chrome River's powerful business rules engine.

#### Consistent User Experience

A single expense reporting and invoice management experience is provided on any device: expenses can be entered when and where they happen. Invoices can be created and routed while review and approvals can also be done anywhere.

#### Enhanced Security

Our web-based application automatically receive updates without prompting users to install new software, ensuring users have access to the latest version at all times. Data is not stored locally on the device, optimizing security.

#### Increased efficiency

With a consistent user experience across all devices, there is no need to retrain your staff on how to complete simple tasks within the application. And if they need task instruction, inapplication help in the form of videos and tutorials is available.

## Receipt Submission

- Easily capture and submit receipts in a variety of ways including: Snap & Send, Direct Upload, and Chrome River SNAP, an optional mobile receipt capture and upload app that enhances the Snap & Send feature.

## Device Variety

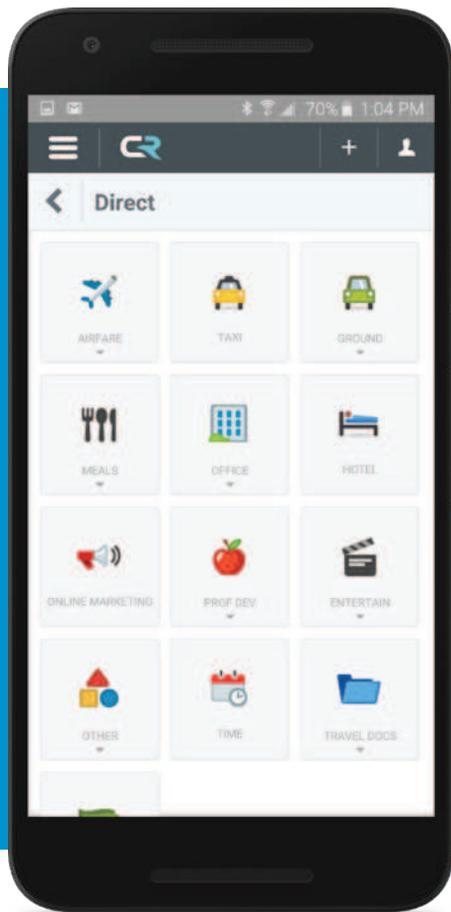

- As users adopt new productivity tools, we constantly evolve along with them and ensure Chrome River works on smartphones, tablets, laptops, and desktops: our solution works across multiple devices, bringing flexibility to your users.

## Optical Character Recognition

- With Chrome River's enhanced OCR processing, crucial data is extracted from receipt images and then used to create line items for expense reports, eliminating the manual task of receipt submission.

## Fully Functional

- With little to no training needed, users can begin to manage their spend and invoices almost immediately with Chrome River across all devices. Our responsive web application offers full functionality on any device to create, submit, and approve invoices and expenses.

*Many of Huron's consultants spend much of their time on the road with clients, so it's critical that their expenses can be submitted and approved in a timely manner. With Chrome River, the entire expense process, including taking photos of receipts, submitting expenses, and expense approval can be done just as easily, whether the user is on a smartphone, a tablet, or a laptop."*
